All streams shall be indirect objects (see 7.3.10, "Indirect objects") and the stream dictionary shall be a direct object. The keyword stream that follows the stream dictionary shall be followed by an end-ofline marker consisting of either a CARRIAGE RETURN and a LINE FEED or just a LINE FEED, and not by a CARRIAGE RETURN alone. The sequence of bytes that make up a stream lie between the end-of-line marker following the stream keyword and the endstream keyword; the stream dictionary specifies the exact number of bytes. There should be an end-of-line marker after the data and before endstream; this marker shall not be included in the stream length. There shall not be any extra bytes, other than white-space, between endstream and endobj.
